

WIFI SETUP GUIDE

Provisioning via
Desktop & Device
Web Page
(Backup Method)

1 Search for the Device Network

Your device produces a Wi-Fi signal that you can connect to. This network signal will stop 5 minutes after power-up. If needed, pull out a battery to reset. To connect to the device network, use a phone or PC to search for the available wireless networks to find the device signal.

From Cell Phone:

In your phone settings, select Wi-Fi to view networks.

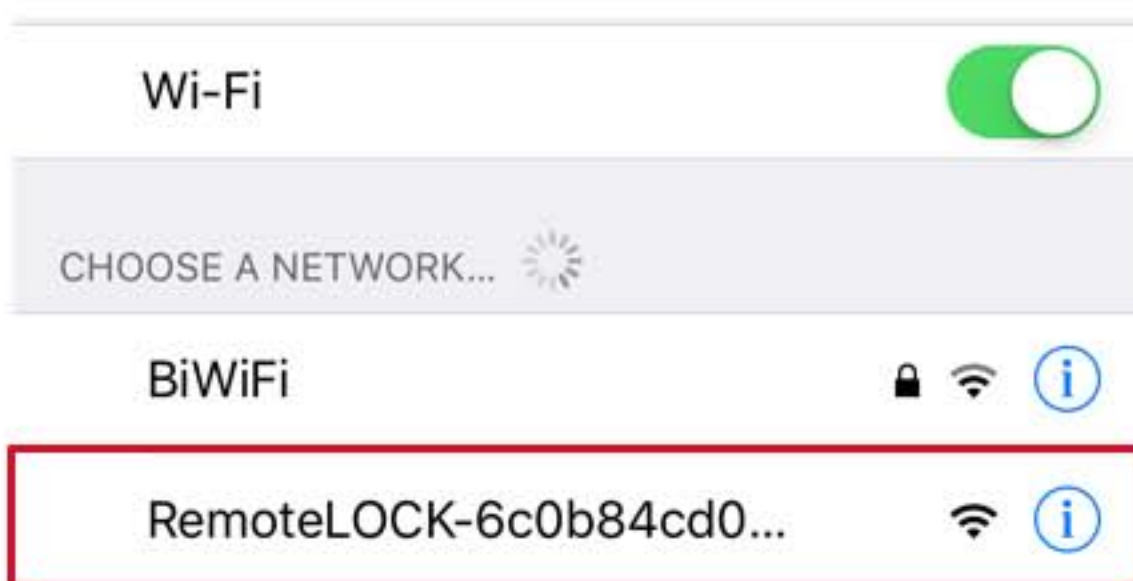

From PC:

In your system tray, select network center icon.

2 Connect to Device Network

From the list of available wireless networks, select the network starting with "RemoteLock"

3 Connect Device to Your WiFi Network

1. Open your phone or PC web browser (as if going to a website). Enter "192.168.0.1" in address bar.
2. After the device searches for available networks, select your Wi-Fi router and click "Next".
3. Enter your router's password and then click "Submit".

4 Register Your Device in the LockState Connect Web App

Name	<input type="text" value="New Lock"/>
Model	<input type="text" value="LS-5i"/>
Serial	<input type="text" value="AC000W"/>
Property	<input type="text" value="Goff Home"/>
<input type="button" value="Create Lock"/>	

Go to www.RemoteLock.com/Login and sign up or login to your account.

Go to the Locks section, then click New Lock and enter your lock's information.
